

## **General Biodiesel wins 2010 Green Washington Award for Reuse**

Seattle Business Magazine awarded General Biodiesel the 2010 Green Washington Award for Reuse. A simpler, more environmentally sound form of recycling than composting, Reuse earned its own separate category for this year.

Founded in 2006, General Biodiesel recycles locally-sourced cooking oils and animal fats to produce bio fuels. Biodiesel from cooking oils is one of the cleanest-burning fuels on the market, producing 85 percent less life-cycle carbon dioxide per gallon than petroleum diesel, according to the EPA.

General Biodiesel has 28 employees and operates out of the McKinstry Innovation Center headquartered in Seattle. This year the company will recycle 600,000 gallons of used cooking oil and reduce CO2 production by an estimated 10 million pounds.
